

Revolutionising Dynamic Governance

Unified

4 distinct benchmarks for safe diving, merged into one powerful credential. It doesn't get simpler than this!

Whilst diving is an exciting sport, there are potential risks if people do not possess the adequate level of fitness or have certain medical complications. As the Governing Body for all underwater sports in Ireland, Diving Ireland must help manage the risks associated with the sport and put measures in place to minimise hazardous situations. The NGB's determination to maximise member safety is truly commendable, and JustGo is delighted to play a significant role in keeping its large membership base safe and protected.

For a member to be deemed **Ready to Dive**, various criteria are assessed. This includes an **annual Medical Disclaimer, annual Fitness Assessment, age-based Medical Assessment and an active Membership.**

Continually monitoring all four categories of compliance can be daunting. To help administer this, Diving Ireland embraced JustGo's innovative features to verify **Ready to Dive** status for the safety of their sport.

How JustGo Changed the Game of Dynamic Governance

4-in-1 intelligent and dynamic feature simplifying governance

Auto-deactivation of **Ready to Dive** credential when failure to meet one or more criteria occurs

Automated communications to update credentials with auto-reactivation when compliant

A Smart System

That Understands Your Governance Needs

CHALLENGES

Divers are required to have an active membership alongside a medical declaration, age-based medical assessment and fitness tests to be considered **Ready to Dive**.

As each diving requirement has its own start and expiration date, it was difficult to monitor the validity of each diving criteria.

Club administrators had to manually notify members in case of failure to fulfil all 4 criteria of safe diving, which was time consuming and difficult.

Discovering and chasing non-active members was a chore in itself. Communicating individually with each member was difficult.

SOLUTION

JustGo created one **powerful credential that addresses all these requirements** whilst maintaining distinct expiration dates for diving assessments and proof of health.

JustGo created a **4-in-1 dynamic governance checking tool**, which ensures if even a single requirement expired, the aforementioned **Ready to Dive** credential would be deactivated.

The system automatically warns members when one or multiple criteria for safe diving may expire, **leaving plenty of time for renewal and minimising overall administrative burden.**

NGBs and clubs can collect reports on inactive members, and guide them to fulfil the diving requirements, thus **boosting total number of active members.**

Innovative Solutions to Meet Your Objectives

With the mission to ensure a safe and qualified community, JustGo continues to innovate smart and intelligent features that truly serve a purpose. We're always on the lookout to create sustainable and effective software to serve sports organisations, and Diving Ireland is a prime example of utilising smart features to yield far-reaching results and a safer community.

Here's what **Paddy Lambe, National Diving Officer at Diving Ireland**, says:

“With over 50 clubs across the country, divers' safety is of utmost priority for us. We take our role in supporting the safety of our community of members safety seriously. The **Ready to Dive** credential was configured for us using standard credential features, and we're really excited about how it simplifies the administration of our safe diving practices for our clubs.”
